The WEATHER

Express Publishing

LET'S START!

What's the weather like today? People are always asking about the weather. Why is that? It is because the weather is a big part of our lives. The clothes we wear, the things we eat and even the games we play depend on the weather!

So, what exactly is the weather? Let's take a look!

Rainy

Windy

Sunny

Snowy

SUNSHINE

1

All
the Earth's heat and
light comes from the sun.
We need the sun to help plants
and animals grow.

We all love sunshine. When the
sun shines we feel good! The sun
gives life to our planet.

The amount of sunshine we have depends on where we live.

North Pole

Cold

Warm

equator —

Hot

Warm

Cold

South Pole

The equator is an imaginary line around the centre of the Earth. The rays from the sun hit the areas near the equator almost straight on. This means that these places are the hottest. The areas far away from the equator are the coldest.

FAST FACT

Solar panels use the heat of the sun to make electricity.
