LET'S START!

Do you and your friends play hide and seek?
If you wear brown, you can hide by a tree.
If you wear green, you can hide in the grass.
Your friends can not see you.
This is **camouflage**!

Animals use camouflage, too! They use
colours, patterns or shapes.
These things help them hide.

Look at the pictures.
Can you see the animals?
What animals are they? Why are they hard to see?

1

COLOURS FOR HIDING

Some animals use colour to hide. This is called **concealing coloration**.

The **arctic fox** lives in a cold, snowy world. Look left. Everything is white! Look right. Everything is white! So the arctic fox is white, too!

The arctic fox uses concealing coloration. Its white fur is the same colour as the white snow. The arctic fox uses concealing coloration to catch its prey.

Look!
The arctic fox is the same colour as the snow. Can you see it?
